results. Visual perception is the ability to interpret the surrounding environment by processing information that is contained in visible light.

Arts, Crats, Cooking and Historical Aids.

This book is a timely comparison of the divergent worlds of policy implementation and policy ambition, the messy, often contradictory here-and-now reality of languages in schools and the sharp-edged, shiny, future-oriented representation of languages in policy. Two deep rooted tendencies in Australian political and social life, multiculturalism and Asian regionalism, are represented as key phases in the country's experimentation with language education planning. Presenting data from a five year ethnographic study combined with a 40 year span of policy analysis, this volume is a rare book length treatment of the chasm between imagined policy and its experienced delivery, and will provide insights that policymakers around the world can draw on.

Through the use of new analytical tools, this book presents a dynamic, sociocultural view of behavioural regulation in learning contexts.

Written in a clear, conversational style, the book begins with the fundamental concepts of nutrition and then applies those concepts to diverse demographic groups in different stages of life. You also learn how selected disease processes work, and how to help communities and individuals achieve health and healthy living.

An impact assessment (IA) study was conducted in Season B 2015/2 to establish the reach of high-iron bean (HIB) varieties to Rwandan bean farmers since these varieties were released in 2010, and to understand the adoption and diffusion patterns that have occurred so far. The IA was carried out in two parts. The first part was a listing survey, which was conducted at the beginning of Season B 2015, during the planting period. A total of 19,575 households were enlisted in 120 randomly selected villages throughout the country, and 93 percent of those households were bean-producing households. The listing exercise revealed that 28 percent of bean farmers had grown at least one HIB variety in at least one season, since 2010—the equivalent of approximately half a million households. In Season B 2015, 20 percent of bean farmers were reported to be growing an HIB—the equivalent of approximately 350,000 households. Detailed results of the listing exercise are available in a separate report³. The second part of the study was a more detailed household survey, which was conducted among a subsample of nearly 1,400 bean-farming households, immediately after harvest had taken place. Both the listing and main household survey are nationally representative of rural bean producing households in Rwanda. This report presents key descriptive results from the main survey and sheds light on issues that may be investigated further in forthcoming publications. Key takeaways from the report are summarized below.

Teaching primary computing without computers? The Computing curriculum is a challenge for primary school teachers. The realities of primary school resources mean limited access to computer hardware. But computing is about more than computers. Important aspects of the fundamental principles and concepts of computer science can be taught without any hardware. Children can learn to analyse problems and computational terms and apply computational thinking to solve problems without turning on a computer. This book shows you how you can teach computing through 'unplugged' activities. It provides lesson examples and everyday activities to help teachers and pupils explore computing concepts in a concrete way, accelerating their understanding and grasp of key ideas such as abstraction, logic, algorithms and data representation. The unplugged approach is physical and collaborative, using kinaesthetic learning to help make computing concepts more meaningful and memorable. This book will help you to elevate your teaching, and your children's learning of computing beyond the available hardware. It focuses on the building blocks of understanding required for computation thinking.

Kids will celebrate America's diversity with these kid-friendly recipes, learning activities, and food history. They get to engage with the history of the U.S. through food, where it is grown, and how to prepare it. This is a natural extension to many areas of the school curriculum and a go-to cookbook for the family.

Legality is a profound work in analytical jurisprudence, the branch of legal philosophy which deals with metaphysical questions about the law. In the twentieth century, there have been two major approaches to the nature of law. The first and most prominent is legal positivism, which draws a sharp distinction between law as it is and law as it might be or ought to be. The second are theories that view law as embedded in a moral framework. Scott Shapiro is a positivist, but one who tries to bridge the differences between the two approaches. In *Legality*, he shows how law can be thought of as a set of plans to achieve complex human goals. His new "planning" theory of law is a way to solve the "possibility problem", which is the problem of how

law can be authoritative without referring to higher laws.

This two volume set (CCIS 901 and 902) constitutes the refereed proceedings of the 4th International Conference of Pioneering Computer Scientists, Engineers and Educators, ICPCSEE 2018 (originally ICYCSEE) held in Zhengzhou, China, in September 2018. The 125 revised full papers presented in these two volumes were carefully reviewed and selected from 1057 submissions. The papers cover a wide range of topics related to basic theory and techniques for data science including mathematical issues in data science, computational theory for data science, big data management and applications, data quality and data preparation, evaluation and measurement in data science, data visualization, big data mining and knowledge management, infrastructure for data science, machine learning for data science, data security and privacy, applications of data science, case study of data science, multimedia data management and analysis, data-driven scientific research, data-driven bioinformatics, data-driven healthcare, data-driven management, data-driven eGovernment, data-driven smart city/planet, data marketing and economics, social media and recommendation systems, data-driven security, data-driven business model innovation, social and/or organizational impacts of data science.
