Students will not only learn the various diagnostic categories of the DSM IV but also how to apply these categories to clients they will be seeing in practice. It will aid students in understanding dual diagnoses, symptom formulation, and the overlap between diagnostic categories.

Written for social workers by a social worker, Mental Disorders, Medications, and Clinical Social Work discusses the etiology, epidemiology, assessment, and intervention planning for common mental disorders. Looking at disorders from an ecosystems perspective, Austrian goes beyond a linear classification approach and DSM-IV-TR categories and encourages social workers to analyze the internal and external environmental factors that contribute to a disorder's development. Austrian's discussion of effective intervention(s) for a particular client also stresses the importance of working with families in treating disorders. In addition to information on new medications, biochemical data on the causes of disease, and diagnostic tests, the revised third edition discusses therapies such as motivational interviewing, cognitive-behavioral, interpersonal, and dialectic.

Differentiate yourself in a competitive marketplace with SUPERVISION: CONCEPTS AND PRACTICES OF MANAGEMENT, 13E. A blend of traditional management concepts and emerging insights, the text draws from the authors' firsthand business experience to deliver the leadership skills hiring managers want but rarely find in new recruits. This comprehensive single source for supervisory management expertise addresses the most critical challenges in business today, including globalization, economic turbulence, transitional and temporary workers, virtual employees, technology, outsourcing, and downsizing. Hands-on and practical, the text complements chapter readings with skill-building techniques and captivating video cases from well-known organizations, letting you experience supervisory roles yourself. Special attention to diversity and ethics also helps you develop a better sense of life beyond the classroom and enhances the text's extensive coverage of communication, decision making, conflict resolution, and other essential supervisory skills. Full exploitation of the DSM-5 allows for more comprehensive care By demystifying the DSM-5, author Sophia Dziegielewski goes beyond the traditional diagnostic assessment and suggests both treatment plans and practice strategy. She covers the changes in criteria to the DSM-5 and what those changes mean for mental health professionals. This resource has been updated to include: New and updated treatment plans All treatment plans, interventions strategies, applications, and practice implications are evidence based Instructions on doing diagnostic assessments and differential diagnosis using the DSM-5 Changes to coding and billing using the DSM-5 and ICD-10 The book includes robust tools for students, instructors, and new graduates seeking

licensure. DSM-5 in Action makes the DSM-5 accessible to all practitioners, allowing for more accurate, comprehensive care.

Explains and demonstrates a model for social workers to communicate with persons of color by casting them in the role of experts on their own lives. Emphasis is placed on the beginning stage of the helping process, the information-gathering stage. What happens next is not addressed directly, although there is a lengthy appendix on culturally relevant treatment and interventions. Early chapters address information for achieving the role of a culturally competent social worker. Subsequent chapters outline steps of the interview model based on the ethnographic interviewing work of James Spradley. Includes chapter exercises and illustrations from interviews drawn from the author's practice and published cases. Appendices offer principles and codes of ethics. CASE DOCUMENTATION IN COUNSELING AND PSYCHOTHERAPY teaches counselors and psychotherapists how to apply counseling theories in real-world settings. Written in a clear, down-to-earth style, the text provides a comprehensive introduction to case documentation using four commonly used clinical forms: case conceptualization, clinical assessment, treatment plan, and progress note. These documents incorporate counseling theory and help new practitioners understand how to use theory in everyday practice. Case studies illustrate how to complete documentation using each of seven counseling models. Readers also learn about the evidence base for each theory as well as applications for specific populations. Designed to produce measurable results that have value beyond the classroom, the text employs learning-centered, outcome-based pedagogy to engage students in an active learning process. Its case documentation assignments-created using national standards-help students apply concepts and develop professional skills early on in their training. When students become practicing mental health professionals they can use this book-with its practical overviews of theories, conceptualization, treatment planning, and documentation-as a clinical reference manual.
