A new edition of a highly successful, award winning textbook for trainee psychiatrists, covering in one volume all the subjects required for the new MRCPsych and similar exams. Written in a highly engaging manner, it will also prove invaluable to qualified psychiatrists who need to keep up-to-date with the latest developments, as well as clinical psychologists, general practitioners, psychiatric nurses and senior medical students

Concise yet comprehensive, Core Psychiatry reflects the latest developments in the curriculum plus all that is new and essential in clinical practice and the sciences that underpin it. It includes new information on the new Mental Capacity Act and Mental Health Act as well as enhanced sections on psychopharmacology, old age psychiatry, child and adolescent psychiatry, forensic psychiatry and rehabilitation. The book also makes reference to the latest NICE guidelines and includes new sections on sleep medicine and trauma psychiatry.

New edition of a popular MRCPsych curriculum based text

Previous edition 'Highly Commended' (Mental Health category) in the BMA Awards 2005

Contains useful summary boxes, lists and key points to make last minute learning easy

Comprehensive and authoritative resource written by contributors to ensure complete accuracy and currency of specialist information

Chapters prepared by specialists working in conjunction with trainees - content totally up-to-date and jointly written by authors who have recently been in the exam situation

Contains the latest findings in sleep medicine and trauma psychiatry

Expanded section on psychology - including social psychology - to reflect the latest MRCPsych examination format

Text updated in full to reflect the new Mental Capacity Act and Mental Health Act

Relevant chapters now contain a 'skills and competency' section to reflect changes in MRCPsych curriculum

Updating and amendments to improve coverage of old age psychiatry, child and adolescent psychiatry, forensic psychiatry and rehabilitation

Contains reference to the latest NICE guidelines in boxes and tables

Enhanced discussion of the use of the best current management options, both pharmacological and psychotherapeutic, the latter including CBT, DBT, EMDR and psychodynamic group, couple and family therapy.

This manual is for busy clinicians and managers. It can help to improve the quality of care by explaining how to apply guidelines in a wide variety of clinical settings. Case studies written by the protagonists themselves describe the experiences of using guidelines in treating a wide range of conditions in primary and secondary care. The final sections collate the lessons learnt from these examples and propose practical solutions that can be applied in everyday clinical care by doctors nurses professionals allied to medicine and healthcare managers.

Following hot on the heels of the launch of the new syllabus and new MRCPsych exam in Spring 2008 by the

Access Free Core Psychiatry 3e Mrcpsy Study Guides

Royal College of Psychiatrists, this book contains 450 multiple choice questions to help psychiatry trainees to prepare for paper 1 of the exam. Supporting these MCQs are detailed explanatory answers and revision notes, referenced to the key textbooks used by trainees. The book's content is closely matched to the MRCPsych syllabus and includes practice papers for true exam preparation.

Psychopathology lies at the centre of effective psychiatric practice and mental health care, and Fish's Clinical Psychopathology has shaped the training and clinical practice of psychiatrists for over fifty years. The fourth edition of this modern classic presents the clinical descriptions and psychopathological insights of Fish's to a new generation of students and practitioners. It includes recent revisions of diagnostic classification systems, as well as new chapters that consider the controversies of classifying psychiatric disorder and the fundamental role and uses of psychopathology. Clear and readable, it provides concise descriptions of the signs and symptoms of mental illness and astute accounts of the varied manifestations of disordered psychological function, and is designed for use in clinical practice. An essential text for students of medicine, trainees in psychiatry and practising psychiatrists, it will also be useful to psychiatric nurses, mental health social workers and clinical psychologists.

This book is intended for psychiatric trainees sitting the CASC component of the MRCPsych exam. Written by authors with recent exam experience and long-term expertise in the field, the text provides 175 stations closely matched to the subjects that appear in the actual exam, along with concise synopses and guidelines for how to target your revision to enable recall of the most relevant information.

Around 760 candidates sit the MRCPsych Part1 each year, with 560 taking Part 2. In the written papers basic sciences and clinical topics are given equal weight - a good knowledge of basic science is therefore essential for success. Since Sciences Basic to Psychiatry was first published in 1992, it has established itself as probably the most successful among the exam-orientated basic science texts. This new edition builds on that success by strengthening coverage in some areas, and by using better illustration to aid comprehension and learning. Features:

- * Revised in accordance with new exam syllabus
- * Clear and readable presentation of the core knowledge necessary for exam success
- * Particularly highly praised for the chapters on the neurosciences, genetics and statistics
- * Relevant for both Part 1 and Part 2
- * Expansion of chapters on psychology and sociology
- * More illustrations than previous edition
