Theological correctness has made speaking in tongues controversial, and it confuses everyone within Christendom. Many doubts which surrendering it are creating fear instead of faith for its authenticity, meanwhile Jesus promised every believer as one of the signs to follow us. Speaking in tongues is not the Holy Spirit, but it is the evidence indicating that the Holy Spirit has come upon you. It happened on the day of Pentecost, when one hundred and twenty believers gathered together in Jerusalem. The Holy Spirit came upon all of them, and they began to speak in tongues as evidence to confirm Jesus's prophecy. Peter couldn't ignore its reality but confirmed that the Holy Spirit had come upon the Gentiles just as they received, when he heard the household of Cornelius speaking in tongues. In Ephesus, Paul also believed the fact that the Holy Spirit had come upon all the twelve converts by laying his hands on them, because they spoke in tongues. Now we contemporary Christians cannot overlook this evidence. Instead, we must continue until we pass to

Semiotic engineering was originally proposed as a semiotic approach to designing user interface languages. Over the years, with research done at the Department of Informatics of the Pontifical Catholic University of Rio de Janeiro, it evolved into a semiotic theory of human-computer interaction (HCI). It views HCI as computer-mediated communication between designers and users at interaction time. The system speaks for its designers in various types of conversations specified at design time. These conversations communicate the designers' understanding of who the users are, what they

know the users want or need to do, in which preferred ways, and why. The designers' message to users includes even the interactive language in which users will have to communicate back with the system in order to achieve their specific goals. Hence, the process is, in fact, one of communication about communication, or metacommunication. Semiotic engineering has two methods to evaluate the quality of metacommunication in HCI: the semiotic inspection method (SIM) and the communicability evaluation method (CEM). Up to now, they have been mainly used and discussed in technical contexts, focusing on how to detect problems and how to improve the metacommunication of specific systems. In this book, Clarisse de Souza and Carla Leitao discuss how SIM and CEM, which are both qualitative methods, can also be used in scientific contexts to generate new knowledge about HCI. The discussion goes into deep considerations about scientific methodology, calling the reader's attention to the essence of qualitative methods in research and the kinds of results they can produce. To illustrate their points, the authors present an extensive case study with a free open-source digital audio editor called Audacity. They show how the results obtained with a triangulation of SIM and CEM point at new research avenues not only for semiotic engineering and HCI but also for other areas of computer science such as software engineering and programming. knowledge about computers word processing (Microsoft Word, Apple Pages, OpenOffice Text Document, etc). As an epub is very similar to a webpage, it is very helpful to have some knowledge about XHTML5, CSS3 and Javascript. However, it is not necessary since the ebook covers the basics about them. The ebook covers just those aspects of XHTML and CSS3 that are required to create the epub "Little Red Riding Hood Sample.epub" that will be the final result after reading the ebook. You have to be willing to learn several open source applications that will help you to create the sample epub. You have to be willing to learn SIGIL, the open source epub editor that will be used to create the sample epub. You need to learn some basics about audio creation and editing, using the open source application AUDACITY. To create the MO files, you need to learn how to use SMIL ASSIST, an open source program that will be used to create the MO files. Throughout the whole ebook I would reference the MO files as the soul of the main added value of the ebook: SYNchronized NArration and HIGHLIGHTed Text (SYNAHIT). I want to coin this name, since the popular Read Aloud term referring to the MO capabilities, often is mistaken with the fact someone may want to read aloud the book. Just Google "Read Aloud" ebooks and you'll find many different interpretations. Following the step by step instructions in chapters 4, 6, and 7, you'll learn to import text, images, and MO files as you build the
