Inflammatory bowel disease (IBD) is a term mainly used to describe 2 conditions: ulcerative colitis and Crohn's disease. Ulcerative colitis and Crohn's disease are long-term conditions that involve inflammation of the gut. Ulcerative colitis only affects the colon (large intestine).

~~Inflammatory bowel disease - NHS - NHS~~

Inflammatory bowel disease symptoms vary, depending on the severity of inflammation and where it occurs. Symptoms may range from mild to severe. You are likely to have periods of active illness followed by periods of remission. Signs and symptoms that are common to both Crohn's disease and ulcerative colitis include:

~~Inflammatory bowel disease (IBD) - Symptoms and causes - ...~~

Inflammatory bowel disease (IBD) is a group of inflammatory conditions of the colon and small intestine. Crohn's disease and ulcerative colitis are the principal types of inflammatory bowel disease. Crohn's disease affects the small intestine and large intestine, as well as the mouth, esophagus, stomach and the anus, whereas ulcerative colitis primarily affects the colon and the rectum.

~~Inflammatory bowel disease - Wikipedia~~

Crohn's Disease and Ulcerative Colitis are the two main forms of Inflammatory Bowel Disease. We are the UK's leading charity for Crohn's and Colitis and we have over 50 pages of information to help inform anyone affected, including friends, family, medical professionals and even employers.

~~About Inflammatory Bowel Disease | Crohn's & Colitis UK~~

An enzyme that helps SARS-CoV-2, the coronavirus causing the COVID-19 pandemic, infect the body also plays a role in inflammation and patient outcomes in inflammatory bowel disease (IBD), according to a new study. The findings raise the possibility that anti-inflammatory drug therapies for IBD may aid recovery from coronavirus.
