Management information systems (MIS) produce the information that managers use to make important strategic decisions. This book takes a decidedly managerial perspective, focusing on how people perceive and respond to information, and how MIS design can use this information to help managers make better decisions, and avoid information overload.

This book, originally published in 1984, established the need for a strategic managerial response to the new technology, which relies on an understanding of the real effects of technology - on organisational structure, management style and employee relations. It assesses the impact of the new information technology on manufacturing systems, employment levels and types, industrial relations and finally on marketing and external relationships.

The field of Information Systems has been evolving since the first application of computers in organizations in the early 1950s. Focusing on information systems analysis and design up to and including the 1980s, the field has expanded enormously, with our assumptions about information and knowledge being challenged, along with both intended and unintended consequences of information technology. This prestige reference work offers students and researchers a critical reflection on major topics and current scholarship in the evolving field of Information Systems. This single-volume survey of the field is organized into four parts. The first section deals with Disciplinary and Methodological Foundations. The second section deals with Development, Adoption and Use of MIS — topics that formed the centrepiece of the field of IS in the last century. The third section deals with Managing Organizational IS, Knowledge and Innovation, while the final section considers emerging and continuing issues and controversies in the field — IS in Society and a Global Context. Each chapter provides a balanced overview of current knowledge, identifying issues and discussing relevant debates. This prestigious book is required reading for any student or researcher in Management Information Systems, academics and students covering the breadth of the field, and established researchers seeking a single-volume repository on the current state of knowledge, current debates and relevant literature.
