"U.S. Representative Sherrod Brown - a leading progressive voice in Congress - takes apart free-trade dogma, myth by myth." "Ten years after NAFTA, free-trade policies have not brought prosperity to Mexican workers, and more than one million American jobs have been lost as a result of the agreement. Do free-trade pacts foster democracy? Brown examines the facts. Are fast-track agreements necessary to fight the war on terrorism? Brown dissects the arguments and the evidence."--BOOK JACKET.

The world has become a human laboratory for the momentous social experiment called neoliberalism. Its proclaimed purpose is to reduce global poverty, its protocols are derived from the orthodox theory of competitive free markets and its policies are enforced by the full weight of the rich countries and global institutions such as the World Trade Organization (WTO), the World Bank and the International Monetary Fund (IMF). This book is a critical examination of this ongoing enterprise, of its history, theory, practice, and most of all, of its outcomes. An international team of contributors has been assembled including Lance Taylor, Ha-Joon Chang and Ajit Singh.

"Lucid, deeply informed, and enlivened with striking illustrations." -Noam Chomsky One economist has called Ha-Joon Chang "the most exciting thinker our profession has turned out in the past fifteen years." With *Bad Samaritans*, this provocative scholar bursts into the debate on globalization and economic justice. Using irreverent wit, an engagingly personal style, and a battery of examples, Chang blasts holes in the "World Is Flat" orthodoxy of Thomas Friedman and other liberal economists who argue that only unfettered capitalism and wide-open international trade can lift struggling nations out of poverty. On the contrary, Chang shows, today's economic superpowers—from the U.S. to Britain to his native Korea—all attained prosperity by shameless protectionism and government intervention in industry. We have conveniently forgotten this fact, telling ourselves a fairy tale about the magic of free trade and—via our proxies such as the World Bank, International Monetary Fund, and World Trade Organization—ramming policies that suit ourselves down the throat of the developing world. Unlike typical economists who construct models of how the marketplace should work, Chang examines the past: what has actually happened. His pungently contrarian history demolishes one pillar after another of free-market mythology. We treat patents and copyrights as sacrosanct—but developed our own industries by studiously copying others' technologies. We insist that centrally planned economies stifle growth—but many developing countries had higher GDP growth before they were pressured into deregulating their economies. Both justice and common sense, Chang argues, demand that we reevaluate the policies we force on nations that are struggling to follow in our footsteps.

Paul Bairoch deflates twenty commonly held myths about economic history. Among these myths are that free trade and population growth have historically led to periods of economic growth, and that colonial powers in the nineteenth and early twentieth centuries became rich through the exploitation of the Third World. Bairoch shows that these beliefs are based on insufficient knowledge and wrong interpretations of the history of economies of the United States, Europe, and the Third World, and he re-examines the facts to set the record straight. Bairoch argues that until the early 1960s, the history of international trade of the developed countries was almost entirely one of protectionism rather than a "Golden Era" of free trade, and he reveals that, in fact, past periods of economic growth in the Western World correlated strongly with protectionist policy. He also demonstrates that developed countries did not exploit the Third World for raw materials during the nineteenth and early twentieth centuries, as some economists and many politicians have held. Among the many other myths that Bairoch debunks are beliefs about whether colonization triggered the Industrial Revolution, the effects of the economic development of the West on the Third World, and beliefs about the 1929 crash and the Great Depression. Bairoch's lucid prose makes the book equally accessible to economists of every stripe, as well as to historians, political

scientists, and other social scientists.

The revised edition of this text includes substantial new material on hunger in the aftermath of the Cold War; global food production versus population growth; changing demographics and falling birth rates around the world; the shifting focus of foreign assistance in the new world order; structural adjustment and other budget-slashing policies; trade liberalization and free trade agreements; famine and humanitarian interventions; and the thrid worldization of developed nations.

'Imad Moosa reminds us that there are at least two sides to a relationship – including those in trade – and that failure of a relationship is rarely due to one side alone. Moosa handles the technicalities of exchange rates dexterously but reminds us constantly of the wider context of the trade relationships that determine them.' – Paul Rule, La Trobe University, Melbourne, Australia Dealing with a topic that has attracted significant media attention, this highly accessible book provides a detailed analysis of the trade dispute between China and the US. While the Americans accuse China of damaging their economy, the Chinese claim their policies are legitimate and that the US has no right to dictate how the Chinese economy should be run. Imad Moosa addresses contentious issues including: whether the Chinese currency is undervalued, whether the undervaluation of the yuan, should it exist, is the cause of the US trade deficit with China (hence revaluation being a justifiable cure) and whether Chinese economic policies are immoral and illegal according to IMF and WTO rules. This challenging and thought provoking book will prove a stimulating read for academics, researchers, students and policymakers with an interest in international economics, international finance, political economy and Asian studies.

Since his election to the U.S. Senate in 2006, Ohio's Sherrod Brown has sat on the Senate floor at a mahogany desk with a proud history. In Desk 88, he tells the story of eight of the Senators who were there before him. "Perhaps the most imaginative book to emerge from the Senate since Senator John F. Kennedy of Massachusetts produced Profiles in Courage." —David M. Shribman, The Boston Globe Despite their flaws and frequent setbacks, each made a decisive contribution to the creation of a more just America. They range from Hugo Black, who helped to lift millions of American workers out of poverty, to Robert F. Kennedy, whose eyes were opened by an undernourished Mississippi child and who then spent the rest of his life afflicting the comfortable. Brown revives forgotten figures such as Idaho's Glen Taylor, a singing cowboy who taught himself economics and stood up to segregationists, and offers new insights into George McGovern, who fought to feed the poor around the world even amid personal and political calamities. He also writes about Herbert Lehman of New York, Al Gore Sr. of Tennessee, Theodore Francis Green of Rhode Island, and William Proxmire of Wisconsin. Together, these eight portraits in political courage tell a story about the triumphs and failures of the Progressive idea over the past century: in the 1930s and 1960s, and more intermittently since, politicians and the public have successfully fought against entrenched special interests and advanced the cause of economic or racial fairness. Today, these advances are in peril as employers shed their responsibilities to employees and communities, and a U.S. president gives cover to bigotry. But the Progressive idea is not dead. Recalling his own career, Brown dramatizes the hard work and high ideals required to renew the social contract and create a new era in which Americans of all backgrounds can know the "Dignity of Work."
