Peak Flow Measurement: An illustrated guide - J. Ayres, P. ...

Peak flow measurement is a quick test to measure air flowing out of the lungs. The measurement is also called the peak expiratory flow rate (PEFR) or the peak expiratory flow (PEF). Peak flow measurement is mostly done by people who have asthma. Peak flow measurement can show the amount and rate of air that can be forcefully breathed out of the lungs.

'I was born with inflammation of the lungs, and of everything else, I believe, that was capable of inflammation,' returned Mr Bounderby. 'For years, ma'am, I was one of the most miserable little wretc

Peak Flow Measurement | SpringerLink

Peak flow scores will vary depending on your age, your height and whether you ' re a man or a woman. The expected values are higher in younger people, taller people and men. Peak expiratory flow (PEF) is measured in litres per minute. Normal adult peak flow scores range between around 400 and 700 litres per minute, although scores in older women can be lower and still be normal. The most important thing is whether your score is normal for you.

Peak flow test | British Lung Foundation

To measure your peak flow: find a comfortable position, either sitting or standing. reset your peak flow meter so the pointer is pushed back to the first line of the scale – this is usually 60. hold the peak flow meter so it's horizontal and make sure that your fingers are not obstructing the measurement scale.

Peak Flow Measurement An Illustrated Guide Hodder Arnold ...

Peak flow meters come in two ranges to measure the air pushed out of your lungs. A low-range peak flow meter is for small children, and a standard-range peak flow meter is for older children, teenagers and adults. An adult has much larger airways than a child and needs the larger range. There are several types of peak flow meters available.
