Originally published in 1934, this book starts at the subject's beginning, but also engages with profoundly more specialist concepts in the field of geometry.

The Book Is Intended To Serve As A Textbook For B.A. / B.Sc. Hons. And Pass Course Students Of Indian Universities And Abroad. It Is Also Meant For The Engineering Students And Other Professional Competitive Examinations Such As Ias, Ies, Pcs Etc.The Text Starts With The Introduction Of Coordinates Of A Point In A Space, Distance Formula, Projection, Direction Cosines, Locus And Followed By The Study Of The Plane, Straight Line, Sphere, Cone, Cylinder, Central Conicoids And Paraboloids. An Appendix Has Been Given On General Equation Of Second Degree. The Salient Features Of The Book Are: \* Presentation Of The Subject In Natural Way \* Description Of The Concepts With Justification \* Grading Of Exercises \* Exercises (Solved And Unsolved) After Each Section And Miscellaneous Set Of Exercises At The End Of Each Chapter. \* Notes And Remarks At Proper Places

\*This book presents in an elegant way, the essentials of two and three dimensions of analytical geometry with plenty of examples to illustrate the basic ideas and to bequeath to the students numerous techniques of problem-solving. The exercises provide ample problems to supplement steady progress and to broaden the intuition of generalization. The overall approach is systematic, rigorous and least dependent on Euclidean propositions.\*--BOOK JACKET.

Designed to meet the requirements of UG students, the book deals with the theoretical as well as the practical aspects of the subject. Equal emphasis has been given to both 2D as well as 3D geometry. The book follows a systematic approach with adequate examples for better understanding of the concepts.

Geared toward advanced undergraduates and graduate students, this text covers the coordinate system, planes and lines, spheres, homogeneous coordinates, general equations, quadric in Cartesian coordinates, and intersection of quadrics. 1947 edition.

The book is meant to introduce all the basic topics of Analytical Coordinate Geometry of Two and Three Dimensions to the students of all leading universities.

Matrix theory has been used to simplify the subject matter. Basic ideas of Vector Algebra and Analysis will be helpful to bridge the modern treatments of different branches.
